

DOSE TO DATA

Medication and check-in tracking

01 · COLOR

**Deep Navy**

#0F1A3E

Primary surface

Navy Rise

#17234B

Depth, footers

Signal Orange

#FE9F5E

Accent on dark

Iris Deep

#2F5FB8

Accent on light

Iris

#548CE8

Data series

Paper

#F8F9FA

Light surface

Signal Orange is for dark surfaces only. It reads 1.93:1 on Paper, so accent type on light is Iris Deep. Iris Deep and Iris are the same hue, 219, one value for each surface. Support text is Slate #5A6478 on Paper, lightening to #98A2B8 on Deep Navy. Sky #82ADFB is the second data series. Tints are Peach #FDE8DA and Lavender #DCE4FB, nothing else.

02 · TYPOGRAPHY

Aa

Poppins

Display. Ad and screenshot headlines, section heads, the wordmark.

Aa

System stack

SF Pro on iOS, Roboto on Android, Inter on web. Interface, body, figures.

Ad headline	Poppins Bold	48 to 64px
Screenshot headline	Poppins Bold	40 to 52px
Subhead	Poppins Medium	20 to 24px
Eyebrow	Poppins SemiBold, caps	12px
Body & figures	System regular, tabular	16px

03 · APP ICON & LOCKUP

**The mark**

The D is the dose, the chart is the data. Never separate them.

**Dose to Data**

Horizontal lockup for narrow space. Min 110px digital. Clear space equals the height of the D.

The field

Every marketing surface starts on Depth. The interface stays light inside the device frame.

Ship the 1024px square master and let iOS apply its own mask. Icon floor is 60px. The orange gradient on the D is fixed: there is no white, navy or single-color version of the mark.

04 · GRADIENTS

**Depth** #0F1A3E → #25315C

The default. Every ad and screenshot one.

**Warm** #FDE8DA → #FEB283

Light surfaces that need energy. Navy type.

**Cool** #DCE4FB → #82ADFB

Data, trends and progress. Navy type.

Always 135 degrees, two stops, one gradient per surface. Across a set, alternate **Depth, Cool, Depth, Warm**. There is no fourth gradient.

05 · IN PRACTICE

- ✓ Lead with Deep Navy. It is the default surface, not an accent.
- ✓ One accent per surface. Warm on dark, cool on light, never both.
- ✓ Extend with tints of the two hues, never with new hues.
- ✓ Speak to the behavior, never to the condition. See section 09.
- ✗ Never set Signal Orange as type on white or Paper. Use Iris Deep.
- ✗ Never introduce a hue outside orange, iris and neutral.
- ✗ Never recolor, isolate or add effects to the D monogram.
- ✗ Never show real medication names in ad creative.

IN APPLICATION

App Store, paid social and interface

06 · APP STORE SCREENSHOTS

Fixed template. Frame one is always Depth.

Lockup top left, constant size, never moves. **Headline** beneath in Poppins Bold, two lines maximum. **Subhead** one line, only if it adds something. **Device frame** bleeds off the bottom on the same crop every time.

The interface inside the frame stays light. The gradient is the field the phone sits on, not the product.

Frames one and two are what appear in search results, so both lead with an outcome rather than a feature.

07 · PAID SOCIAL

Depth is the field. Orange appears once.

Signal Orange carries the CTA, or one highlighted figure, or one underline. Once per frame, never twice. Interface always inside a device frame, always light, never full bleed.

Lockup in frame one and on the end card. Not in between.

Feed	4:5	32px floor
Stories, Reels, TikTok	9:16	40px floor
Static and carousel	1:1, 4:5	32px floor

Variety comes from the gradient, the frame format and the hook angle. Never from a color or typeface outside this document.

08 · IN THE APP

The interface is light. Paper surfaces, white cards, Deep Navy type. The dark field belongs to marketing, not to the product.

Charts. Iris is the primary series, Sky the comparison. Signal Orange marks the current value only, never a whole series. Dose changes are Deep Navy vertical markers.

States. Success green and error red exist only in the interface, as system feedback. They never appear in marketing creative.

Figures. Tabular numerals everywhere, so scores and doses do not shift between states.

09 · RESTRICTED CATEGORY

This app advertises under health and personal attribute rules

- ✗ No real medication names on screen in any ad creative.
- ✗ No addressing the viewer as having a condition or prescription.
- ✗ No clinical outcome or improvement claims. This app records, it does not treat.
- ✓ Speak to the behavior: tracking, logging, noticing, seeing a pattern.

Creator scripts carry the same rules. A creator naming their own prescription on camera is the same policy risk at a higher review cost.
